

# Oven control

## Product description:

- Main sensor for switching the oven on/off
- Lock sensor for locking the selected settings or as a child safety measure
- Time display with the functions realtime clock, interval timer, cooking time and stop time display
- Switch-off functions
- Time controlled at the end of a defined cooking time or on reaching of a defined stop time and temperature controlled after reaching a defined temperature inside the food being cooked
- Temperature display for displaying the set and actual temperatures for the oven and the food being cooked (food thermometer temperature)
- Main relay for full isolation of the loads from the mains
- Fan relay for the temperature-dependent control of a cooling fan
- Function sensors for seven configurable operating modes
- Switch relay for seven selectable loads
- Faults and incorrect operation evaluation with safety cut-off
- Acoustic signals

## Options:

- Reduction in functionality by lower fitment levels possible (e. g. no food thermometer function or individual function sensors)
- Selectable locking of any relays with respect to one another
- Multiple control of relays
- Maximum temperature and suggested temperature selectable
- Switch-on and off temperature of the cooling fan for the oven area selectable
- Ambient temperature monitoring/safety

Touch control  
oven control

Modern ovens are increasingly becoming a key design element in the kitchen. The use of touch control technology enables a completely smooth surface without holes for rotary knobs or push buttons.
